## **PREFACE**

Goddard Space Flight Center sponsored the Tenth TAE Users' Conference on June 14-17, 1993 held at Goddard.

This document represents the proceedings of the Tenth TAE Users' Conference. The presentations included in these proceedings were published as received from the authors with little modification and editing.

PRECEDING PAGE BLANK NOT FILMED

## Message From the TAE Project Manager

This was the first TAE conference that followed an informal workshop format with panel discussions, demonstrations, tutorials and working sessions. It provided a chance for all attendees to participate - and they did! The informal format worked extremely well and helped to create a very interactive environment. Attendees actively participated, and there was a good exchange of information and experiences between TAE users and developers. This feedback from many of you will help us plan future directions for TAE Plus.

The Tenth TAE Conference is the last TAE Users' Conference that Goddard Space Flight Center will coordinate. With the software being transferred into the private sector, all future user conferences will be managed by Century Computing, Inc., the commercial developers/distributors of TAE Plus. On this note, the conference offered a great opportunity for the TAE Project Office, the TAE Support Office and Century Computing to respond to TAE users' questions, concerns and comments about the commercialization of TAE. Several of the presentations discussed more details about the transfer and described what will be available in TAE Version 5.3, the first commercial release. I think we all came away with a better understanding of what the technology transfer "means to me".

Many thanks to each and everyone who participated in the conference.

**Chris Rouff**  
**TAE Project Manager**  
**NASA/Goddard**

## Acknowledgements

The TAE Project would like to express its appreciation to everyone who demonstrated their application at the conference and to all those who participated in the panel sessions. In addition, we would like to thank the following individuals for their significant roles in planning and organizing the conference:

Elfrieda Harris, TAE Support Office, RMS Technologies, Inc.  
Arleen Yeager, TAE Support Office, RMS Technologies, Inc.

TAE is a NASA software project within the Data Systems Technology Division at Goddard Space Flight Center with contract support by Century Computing, Inc. The work is sponsored by NASA's Office of Space Communications.

*Page 1 of 9*

*June 14, 1993*

# Outline

- Using the GNU g++ compiler
- Using the ObjectCenter Environment
- Data Manipulation in a TaePanel constructor
- TaePanelFile
- Examples of TAE and C++

# Using the GNU g++ Compiler

- On Sun platforms, TAE Plus v5.2 is delivered with libraries built with the Sun C++ 2.0 C++ compiler.
- However, it also tested with g++ 1.40.3 on a Sun. If you want to use g++, you must recompile the entire tree. See *Building TAE Plus from Source*. (g++ can't link with Sun C++ compiled object code.)

**tac+**

# Using the ObjectCenter Environment

- Due to a bug in ObjectCenter 1.2, many items will not appear in the panels when running a debug session. (You can get a tedious workaround from the TAE Support Office if necessary.)
- This bug was fixed in ObjectCenter 2.0.

# Data Manipulation in a TaePanel Constructor

- When dynamically changing information about a panel or its items in the panel's constructor, you must use the TaeVar or TaeVarTable classes.
- The TaePanel and TaeItem class can't be used because the Wpt panels have not been created yet. They are created by the TaePanel::Show method.

```
panel1C::panel1C (TaeCollection *collect) : TaePanel ("panel1",
collect)
{
    // create an instance of each item in the panel.
    new TaeItem (this, "button1", &button1_React);
    TaeVarTable* viewTable = this->ViewTable();
    TaeVar* panelVar = viewTable->GetTaeVar("_panel");
    TaeVar* itemVar = viewTable->GetTaeVar("button1");
    itemVar->Set("fg","black");
    panelVar->Set("bg","white");
}
```

**tae+**

# TaePanelFile

- TaePanelFile objects allow the user to register and field event sources such as file and socket descriptors.
- C++ binding to Wpt\_AddEvent.
- Subclass to give virtual methods your own functionality.

```
class PanelFileC : public TaePanelFile
{
public:
    PanelFileC (int);
protected:
    virtual int HandleEvent (const TaeEventHandler&);
};
```

# TaePanelFile (cont)

```
int PanelFileC::HandleEvent(const TaeEventHandler& )
{
    #define BUFFER_SIZE 132
    #define MIN_BYTE 1

    char buffer[BUFFER_SIZE];

    int n;

    // NOTE: There are a few extra file events that can and are
    //        being ignored

    int fd = this->Descriptor();

    n = read(fd, buffer, BUFFER_SIZE-1);

    while (n>=MIN_BYTE)
    {
        printf("data byte = %s \t returned block size = %d byte
        \n", buffer, n);

        n = read(fd, buffer, BUFFER_SIZE);
    }

    return 0;
}
```

**tæt**

# TaePanelFile (cont)

- Create an instance

```
PanelFileC* PanelFile = new PanelFileC(fd);
```

- Now you must register the instance with the TaeEventHandler.  
One option is to register the instance in the subclass' constructor.

```
PanelFileC::PanelFileC (int d) : TaePanelFile (d)  
{  
    EventHandler->Register(this, (int) WPT_UPDATE_READMASK);  
}
```

- De-register the object with TaeEventHandler. This is often done in the subclass' destructor.  
  
EventHandler->Deregister(PanelFile);

# Examples of TAE and C++

- `$TAEDEMOSRC/ddodemo.cc` and `$TAEDEMOSRC/timerdemo.cc`  
are two C++ programming examples delivered with TAE v5.2.
- New v5.2 Tips and Tricks document (coming soon)

## Object Cloning

- 7 -

PRECEDING PAGE BLANK NOT FILMED

12-11-68, 12-11-68, 12-11-68

## ***Object (Tae Item) Cloning***

Instead of creating some maximum number of items on the panel, create only a sample in the workbench. At run time, based on certain information at hand, dynamically create needed new items by making each a clone of the sample item.

### ***Rationale***

- Number of items is unknown until run time.
- One event handler for all items.

---

## *Sample Objects Created using the Workbench*

## ***Problems Encountered***

Protected clone method(s) (5.2 beta)

## ***Work-around/Solution***

My own 'clone' function

## ***Much Better Solution***

TAE+ 5.2

## ***Work-around/Solution: my own 'clone' function***

1. instantiate a new item:

`new_item = new sample_item_class (panel,new_item_name)`

2. furnish the new item:

- extract from the sample the resource values (both common to all presentation types and specific to the type being dealt with)
- set these resources for the newly instantiated item with extracted values except for a new location (i.e., the 'origin')

## ***The Better Solution: official TAE+5.2***

1. instantiate a new item:

```
new_item = new sample_item_class(panel,new_item_name,  
                                   &react_func)
```

2. furnishing:

```
View/TargetTable()->Add(sample_item->GetView/TargetVar()  
                        ->Clone(new_item_name))
```

# **TAE+ in Ada**

---

## **Using Ada with TAE+**

**Roger Sheldon**

**Loral AeroSys**

# Agenda

---

- Describe application
- Discuss Pros and Cons of using TAE+ and Ada
- Summary

# Overview of Application

---

- Developed a planning and scheduling tool, SORTIM, for the US Air Force.
- Performs resource scheduling for student pilot training. Resources include students, instructor pilots, aircraft, simulators, and classrooms.
- SORTIM is based on ROSE, the Request Oriented Scheduling Engine. ROSE was developed by Loral AeroSys for NASA Goddard Space Flight Center. ROSE has it's own GUI developed in Ada using TAE+, Motif, and X Windows.

**Loral AeroSys**

# Overview of Application, cont.

---

- SORTIM is based on ROSE, but has a completely different user interface, also developed using TAE+, Motif, and X Windows.

# Pros of Using TAE+ and Ada

---

- By using Ada, the programmer is less likely to write buggy code due to Ada's strong type checking.

# **Cons of Using TAE+ and Ada**

---

- TAE+ was written in C++. The Ada bindings to TAE+ do not match exactly with the programmer's interface available to the C++ programmer.
- The underlying Ada bindings to Motif and X Windows also fail to provide all the features available to the C programmer.
- Some of the Ada bindings are broken.

# Summary

---

- Using TAE+ to develop the SORTIM GUI saved considerable time.
- Given a choice, the best language to use with TAE+ is C++.

**Loral AeroSys**

**DJMA**  
*Managing the Design of the User Interface*

**WHAT MAKES AN INTERFACE USABLE?**  
**Example THREE: Color**

**PRINCIPLES:**

- Use color sparingly
- Use color to support the user's task
- Use color consistently
- Provide good foreground/background contrast
- Color contrasts better with black or white than with other colors
- Use lighter (vs. darker) colors to draw attention
- Avoid saturated blue for text
- Exploit cultural color associations
- "Warm" colors appear larger than "cool" colors
- Allow users to turn color coding off or ask for different coding criteria

**DJMA**  
*Managing the Design of the User Interface*

**WHAT MAKES AN INTERFACE USABLE?**  
**Example FOUR: I/O**  
**SOUND AS OUTPUT**

"One can imagine how a single sound could be used to give information about a file arriving in a message system. The file hits the mailbox, causing it to emit a characteristic sound. Because it is a large message, it makes a rather weighty sound. The crackle of paper indicates a text file - if it had been a compiled program, it would have clanged like metal. The sound comes from the left and is muffled: The mailbox must be in the window behind the one that is currently on the left side of the screen. And the echoes sound like a large empty room, so the load on the system must be fairly low. All this information from one sound!"

William W. Gaver, "Auditory Icons: Using Sound in Computer Interfaces", Human-Computer Interaction, 2, no. 2(1986), 167-177

*Managing the Design of the User Interface*

**HOW DO YOU DO IT?**  
**Expertise**

**User Interface Designer**

**Minimum Requirements:**

- ▶ Minimum 3-5 years experience in a software development environment
- ▶ Experience designing user interfaces
- ▶ Motivation/interest in designing user interfaces
- ▶ Strong interpersonal skills
- ▶ Strong negotiating skills

**On-The-Job Training:**

- ▶ Send to short courses or night courses on basic user interface design and cognitive psychology
- ▶ Send to annual SIGCHI and Human Factors Society conferences

**DJMA**  
*Managing the Design of the User Interface*

**WHY SHOULD YOU CARE?**

**SAMPLE COST/BENEFIT ANALYSIS  
 OF ADDING HUMAN FACTORS TASKS  
 TO A SOFTWARE DEVELOPMENT PROJECT:**

adapted from: Mantel, Marilyn M. and Tooley, Toby J., "Cost/Benefit for Incorporating Human Factors in the Software Lifecycle", ACM Communications, April 1988, Vol. 31, No. 4, pp 428-438

**GENERAL ASSUMPTIONS:**  
 Medium-sized software system (32,000 lines source code)  
 15 person years to build (including HF time)  
 System to be used by 250 employees  
 Developers and HF Engineers fully loaded wages = \$35.00/hour  
 Users fully loaded wages = \$25.00/hour  
 Clerical support staff fully loaded wages = \$15.00/hour

**ANALYSIS SUMMARY:**

|                     |                       |
|---------------------|-----------------------|
| TOTAL BENEFITS:     | \$ 175,104 (per year) |
| TOTAL COSTS:        | 132,185 (one time)    |
| FIRST YEAR SAVINGS: | = \$ 42,919           |

# Managing the Design of the User Interface

**DJMA**  
*Managing the Design of the User Interface*

**WHY SHOULD YOU CARE?**

**DERIVATION OF BENEFITS**

**1. DECREASED TRAINING**  
Typical 1 week training course reduced by 25% or 10 hrs  
250 users  
Hourly rate of \$25  
  
 $250 \text{ users} \times 10 \text{ hrs} \times \$25 = \$62,500 \text{ in first year}$   
**TOTAL:** **\$62,500**

**2. DECREASED ERRORS**  
250 users  
1.5 errors eliminated per user per day  
230 working days per year  
2 minutes in recovery time per error  
Hourly rate of \$25  
  
 $250 \text{ users} \times 1.5 \text{ errors} \times 230 \text{ days} \times \$0.833/\text{error} = \$71,846 \text{ per year}$   
**TOTAL:** **71,846**

copyright 1983 Deborah J. Mayhew & Associates**39**

**DJMA**  
*Managing the Design of the User Interface*

**WHY SHOULD YOU CARE?**

**DERIVATION OF BENEFITS**

**3. INCREASED PRODUCTIVITY**  
250 users  
60 screens per day  
230 days per year  
Processing time per screen reduced by 1 second  
Hourly rate of \$25  
  
 $250 \text{ users} \times 60 \text{ screens} \times 230 \text{ days} \times 1/3600 \text{ hrs} \times \$25 = \$23,958 \text{ per year}$   
**TOTAL:** **\$23,958**

**4. DECREASED LATE DESIGN CHANGES**  
Changes made early cost 1/4 of changes made after implementation  
20 changes made early  
8 hrs per change  
Hourly rate of \$35  
  
 $\text{Early change cost} = 20 \text{ changes} \times 8 \text{ hrs} \times \$35 = \$5,600$   
 $\text{Late change cost} = 4 \times \text{early change cost} = \$22,400$   
 $\text{Savings} = \text{late change cost} - \text{early change cost} = \$16,800 \text{ in first year}$   
**TOTAL:** **16,800**

copyright 1983 Deborah J. Mayhew & Associates**40**

# Managing the Design of the User Interface

**DJMA**  
*Managing the Design of the User Interface*

## WHY SHOULD YOU CARE?

**Common questions about CBA of Human Factors function**

**Is time a legitimate benefit for a CBA?**  
Yes  
Time is money.  
User time can be expensive.  
Companies often want to increase volume of sales/service without increasing personnel.

**Will users actually take advantage of potential productivity gains?**  
Yes.  
Studies show users realize bigger productivity gains on complex tasks than on simple ones.  
Organizations provide incentives for productivity.  
Personal and anecdotal experience suggest people make use of more powerful tools by being more productive.

**Why should development incur the cost when users get the benefits?**  
To meet overall business goals.  
Development should be driven by business goals.

**DJMA**  
*Managing the Design of the User Interface*

WHAT HAS THEIR EXPERIENCE BEEN?

(An Aerospace Contractor): CAD

A large aerospace contractor evaluated several CAD systems

An identical task was performed by expert operators on each vendor's equipment

Task was to input a complex 3D part, starting with engineering sketches

RESULTS:

Fastest system: 4 hours to complete task

Slowest system: 8 hours

The contractor purchased the fastest system

44

# Managing the Design of the User Interface

**DJMA**  
*Managing the Design of the User Interface*

**WHAT HAS THEIR EXPERIENCE BEEN?**

**(A major computer vendor): On-Line Help**

**Engineers proposed an on-line help system be added to an existing product**

**Customer Support objected, concerned it would be more software to support**

**Help system was implemented**

***Help calls on product reduced by 30% as a result***

copyright 1993 Deborah J. Mayhew & Associates **45**

# 1980

TAE  
10th Users  
Conference

TAE  
Concept  
Plan

### REQUIREMENTS

- multiuser, portable applications control executive
- friendly environment for users
- extensive information management support
- standard set of executive services
- extensibility to allow installation of new programs with ease
- VICAR compatible

4

Data Systems  
Technology  
Division  
520

# 1981

TAE  
10th Users  
Conference

- Develop Proof-of-Concept Prototype
- Implementation language Selection Issue
- Support 3 operational systems
- Future versions must be upward compatible
- TAE Support Office created
- 1st TAE External Review

5

Data Systems  
Technology  
Division  
520

# 1982 - 84

TAE  
10th Users  
Conference

- Four prototype releases between August '81 and Oct '82
- C selected for implementation language
- By 1982, 13 different projects were using prototype versions
- November 1983, first operational system, V1.0
- New releases delivered in 1983 and 1984
- Operational on VAX/VMS, PDP 11/RSX-11M, Data General Eclipse
- TAE ports into UNIX environment
- TAE Support Office works with the user community
- By 1984, 30 different user sites are recorded

6

# 1985

TAE  
10th Users  
Conference

- Introduction to the Macintosh and the arrival of GUIs with mice and windows
- Arrival of first "low-cost" graphic workstations with windows
- 5th TAE Users' Conference
- ... And the fun begins
  - experiments with VT220 and VAXStation 100
  - the TAE Facelift phase

7

# 1986- 89

TAE  
10th Users  
Conference

- Conceptual Description of a WorkBench in '86
- Rapid Proof-of-Concept Prototype of TAE Plus in '87
  - Smalltalk and X Windows 10
- 6th Users' Conference ('86) and 7th Users' Conference ('88)
- Object-oriented language selected for implementation language
  - C++ or Objective C?
  - Compiler Woes
- Papers given at ACM Symposium '87, OOPSLA '88, NCGA '88, Exhibition '89
- Two Prototypes in '88 followed by two beta releases in '89

8

Data Systems  
Technology  
Division  
320

# 1990

TAE  
10th Users  
Conference

- TAE Plus papers given at USENIX '90, MIT X Conference '90
- Over 350 Beta Test Sites
- TAE Plus V4.1 (1st Operational Release) goes to COSMIC in '90
- 8th Users Conference hosted by JSC

9

## TAE 8th Users Conference

### Future Directions

- Full Motif functionality support ?
  - WorkBench support for all Motif objects
  - WorkBench support for Motif conventions/style
  - UIL support
- *Architect/Builder* WorkBenches
- Integrate/add object builder into TAE Plus
- Graph builder support
- Hypermedia support
- WorkBench improvements
- Support object direct manipulation and object dependencies

6/90

# 1990

TAE  
10th Users  
Conference

- TAE Plus papers given at USENIX '90, MIT X Conference '90
- Over 350 Beta Test Sites
- TAE Plus V4.1 (1st Operational Release) goes to COSMIC in '90
- 8th Users Conference hosted by JSC

# 1991

TAE  
10th Users  
Conference

- Honorable Mentions for "Best in Open Systems Solutions" (FEDUNIX)
- NASA Group Achievement Award to TAE Plus team
- TAE Plus presented/demoed at several aerospace conferences and tutorial at MIT X Conference
- TAE Plus Submitted as a candidate API to IEEE 1201 Committee
- V5.1 (with OSF/Motif™ toolkit) is delivered to COSMIC
- 9th TAE Users Conference in held in November '91

Data Systems  
Technology  
Division  
520

## 1992

TAE  
10th Users  
Conference

- TAE Plus article published in The X Resource Journal
- TAE Plus presented/demoed at CHI'92 and HCI '92
- Over 500 TAE Plus V5.1 User Sites
- TAE Plus V5.2 is delivered to COSMIC
- Decision to transfer the technology...Why Now?
- Planning the transition

11

Data Systems  
Technology  
Division  
520

## 1993

TAE  
10th Users  
Conference

- GSFC's TAE Project Management changes hands
- TAE Plus article published in ACM's TOIS
- V5.2 goes to COSMIC
- Technology Transfer Agreement is finalized
- TAE 10th Users Conference
- Commercialization of TAE Plus

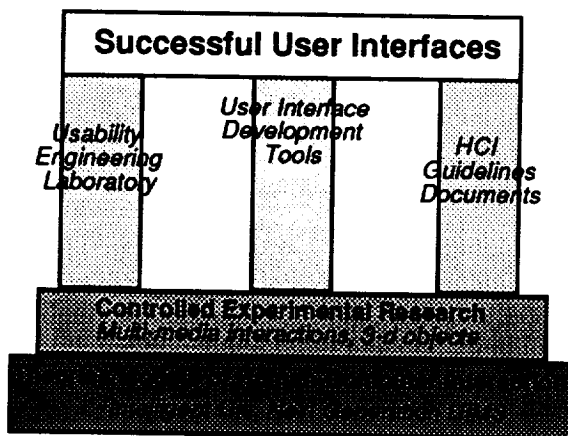

12

Data Systems  
Technology  
Division  
S20

## Future Directions

TAE  
10th Users  
Conference

## Agenda

- ▲ Introducing Century Computing
- ▲ TAE Plus Business Philosophy & Plans
- ▲ TAE Plus Development Directions
- BREAK
- ▲ TAE Plus v5.3

## Introducing Century Computing

- ▲ Our People
- ▲ Our Company
- ▲ Our Business

## Our People

- ▲ 47 Employees
- ▲ Average of 12 yrs Experience
- ▲ Expertise in C, C++, Ada
- ▲ Over 50% with Advanced Degrees

## Our Company

- ▲ Founded in 1979
- ▲ Began TAE Development in 1981
- ▲ Employee Owned
- ▲ Financially Sound
- ▲ Committed to Customer Satisfaction

## Our Business

Graphical User  
Interfaces

Image Processing

## Our Business

Simulation

Spacecraft  
Ground Systems

## 1992 Business Mix

Government

## Business Philosophy and Plans

- ▲ Focus on Installed Base
- ▲ Emphasize Quality
- ▲ Promote Customer Participation
- ▲ Meet Customer's Needs
- ▲ Provide an Affordable Product

## Focus on Installed Base

- ▲ Continue Excellent Support and Services
  - Technical Support Office
  - Newsletter
  - Users' Conference
- ▲ Make Upgrade to v5.3 Affordable

## Emphasize Quality

- ▲ Fix Known Bugs
- ▲ Beta Test Sites
- ▲ New QC and QA Procedures
- ▲ Automated Testing
- ▲ Quality Service

## Customer Participation

- ▲ TAE Plus Advisory Group
- ▲ Electronic Suggestion Box
- ▲ E-mail Discussion Group
- ▲ Users' Conferences
- ▲ User Surveys
- ▲ Focus Groups

## Meet Customer's Needs

- ▲ Customer Satisfaction Key to Success
- ▲ Market Forces at Work
- ▲ New Features
- ▲ Better Documentation
- ▲ Competent & Available Technical Support
- ▲ Technical Training Seminars
- ▲ Consulting Services

## An Affordable Product

- ▲ Aggressive Pricing
- ▲ Creative Licensing
- ▲ Unbundle Ada and C++
- ▲ Government and Educational Discounts

## Development Directions

- ▲ Truly Graphical Interfaces
- ▲ Direct Manipulation
- ▲ Rapid Prototyping and Iterative Refinement
- ▲ Non-Programmer Use
- ▲ Standards Compliance
- ▲ Integration with Other Tools
- ▲ Targeted Application Areas

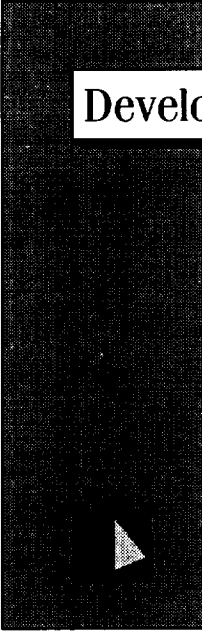

## Questions and Answers

Coming up:  
TAE Plus v5.3

## TAE PLUS v5.3

Don Link  
Century Computing, Inc.  
1014 West Street, Laurel, MD 20707  
(301) 953-3330  
Internet: dlink@ccn.com

## Development Directions

- ▲ Truly Graphical Interfaces
- ▲ Direct Manipulation
- ▲ Rapid Prototyping
- ▲ Non-Programmer Use
- ▲ Standards Compliance
- ▲ Integration with Other Tools
- ▲ Targeted Application Areas

## Graphics + Direct Manipulation

v5.3

- ☒ New Types of DDOs (e.g., 2-D mover)
- ☒ Import of Graphics (e.g., TIFF)
- ☒ DDO Input
- ☒ Composite DDOs
- ☒ Object Creation at Runtime
- ☐ Color Pixmaps
- ☐ Movable Items at Runtime
- ☐ Simple Graphic Decorations

## 2-D Movers

## Import of TIFF Pictures

## DDO Input

- ▲ Supports direct manipulation applications
- ▲ Increases flexibility of user input & control

## DDO Input (Selection)

- ▲ Keys are separate dynamics
- ▲ Mouse clicks on keys generate events for DDO

## Composite DDOs

Thermostat

Auto Dashboard Under Design

- ▲ Allows collections of DDOs to be treated as one unit
- ▲ Allows different types of DDOs on a common background

## Runtime Creation of Dynamics

## Rapid Prototyping

v5.3

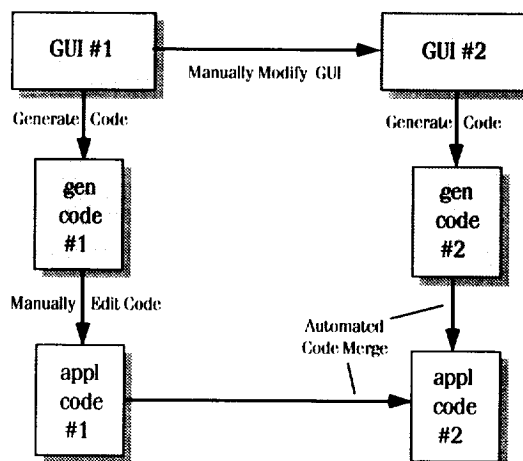

- ☒ Automated Code Merge
- ☒ GUI Scripting
- ☐ Addition of New Widgets
- ☐ Tool Maker's Workbench
- ☐ Workbench Productivity Aids

## Automated Code Merge

- ▲ Speeds up iterative development
- ▲ Reduces maintenance costs
- ▲ Reduces errors related to code regeneration
- ▲ Promotes iterative development

## How It Works

## GUI Scripting

- ▲ Automated and Repeatable Application Tests
- ▲ Application Demos
- ▲ Tutorials
- ▲ Record/Playback Facility
- ▲ Based on perl Language

## Non-Programmer Use

v5.3

- ☐ Extended Connections
- ☐ Inter-Item Relationships
- ☐ Object Templates with Inheritance
- ☐ Composite Presentation Types

## Standards Compliance

v5.3

- ☒ UIL Support
- ☒ ANSI C
- ☐ Full Motif Widget Set
- ☐ Geometry Management

## UIL Support

- ▲ Code Generation of UIL and Mrm
- ▲ TAE Plus Applications without Runtime Libraries (Wpt, Vm, Co)
- ▲ New DDO Widget
- ▲ Increased Portability of Applications
- ▲ Easier Access to Widget Resources & Callbacks
- ▲ Easier Use of Non-TAE Widgets

## ANSI C Support

- ▲ Increased Application Portability
- ▲ Improved Code Quality and Maintenance via Function Prototypes

## Integration with Other Tools

- v5.3
- ☐ Software Development Tools  
e.g., Energize, ObjectCenter
  - ☐ U/I Design Tools  
e.g., style checkers/advisors
  - ☐ Usability Testing Tools

## Targeted Application Areas

- ▲ Image Processing
- ▲ Geographic Information Systems
- ▲ Command & Control

## Summary of TAE Plus v5.3

v5.3

- ☑ 2-D Movers
- ☑ Interviews 3.1 with Graphics Import
- ☑ DDO Input
- ☑ Composite DDOs
- ☑ Runtime Creation of DDO Dynamics
- ☑ Automated Code Merge
- ☑ GUI Scripting
- ☑ UIL and DDO Widget
- ☑ ANSI C

## WHAT IS CHIMES?

Automation  
Technology  
Section

Code 522.3

- **User-Interface Designer's Associate**
- **Knowledge - Based Evaluation of UI Design's "Look and Feel"**
- **Modifier of UI Designs for Compliance with Human Factors Guidelines and Toolkit Style Guides**

Mission  
Operations and  
Data Systems  
500

## INTRODUCTION TO CHIMES

Automation  
Technology  
Section

Code 522.3

### • **PROBLEM:**

**How can we automate a human factors evaluation of user-interface design?**

### • **TECHNICAL APPROACH:**

- Model Demands on Users
- Check for Compliance with Guidelines
- Prototype Evaluation Concepts

### • **PRODUCT:**

**Computer-Human Interaction Models (CHIMES) Methodology and Toolset**

### • **BENEFITS:**

**Savings in Time and Expense  
Training in Human Factors for UI Designers**

# CHIMES ARCHITECTURE FOR COMPLIANCE CHECKING

Mission  
Operations and  
Data Systems  
500

## CHIMES: CURRENT STATUS

Automation  
Technology  
Section

Code 522.3

- **Proof-of-Concept Prototype (CHIMES '93)**
  - Demonstrates evaluation graphic features for single and multiple UI panels
  - Demonstrates Advice-in-Context, including recommended colors
  - Supports automatic modification and re-evaluation of UI design
  - Supports utilization of sample-design library
- **Continuing R&D In Progress**

# User Interaction Testing of the User Interface

by

James H. Hicinbothom  
Senior Scientist  
**CHI Systems, Inc.**

Sponsored by  
U. S. Army Research Laboratory  
Human Research & Engineering Directorate  
(Under Contract # DAAA15-92-C-0026)

# Motivation

---

- Bad systems development starting with lines of code and no requirements or clear design
- Bad systems development that assumes the user is a peripheral with an I/O interface
- Slightly better systems development that incorporates evaluation, although put off until near the end of development
- Decreasing productivity after automation in some situations (e.g., when work flow obstructed by inappropriate design)
- Friends, relatives, and neighbors who are abused by bad tools at work, home, and play

# Background

---

- Human-computer interaction dependent on situation
  - = **task domain(s) x tool(s) x user population(s)**(task domain knowledge and tool knowledge are critical attributes of human subjects)
- Each situation different enough to constrain generalizability of interaction designs
- The only 'constant' is the human cognitive architecture, and thus, human cognitive limits

**Therefore, evaluation must address both the specifics of the situation, and the more general human cognitive limits at work in the situation.**

Additionally, this evaluation should be based on analyses of **both the static features** (e.g., layout, object semantics, vocabulary usage, and pre-defined 'connections') **and the dynamic features** (e.g., mappings of cognitive task structure to 'threads' of user action sequences, identified attention shifts, and undesirable navigation behaviour) **of the human-computer dialogue.**

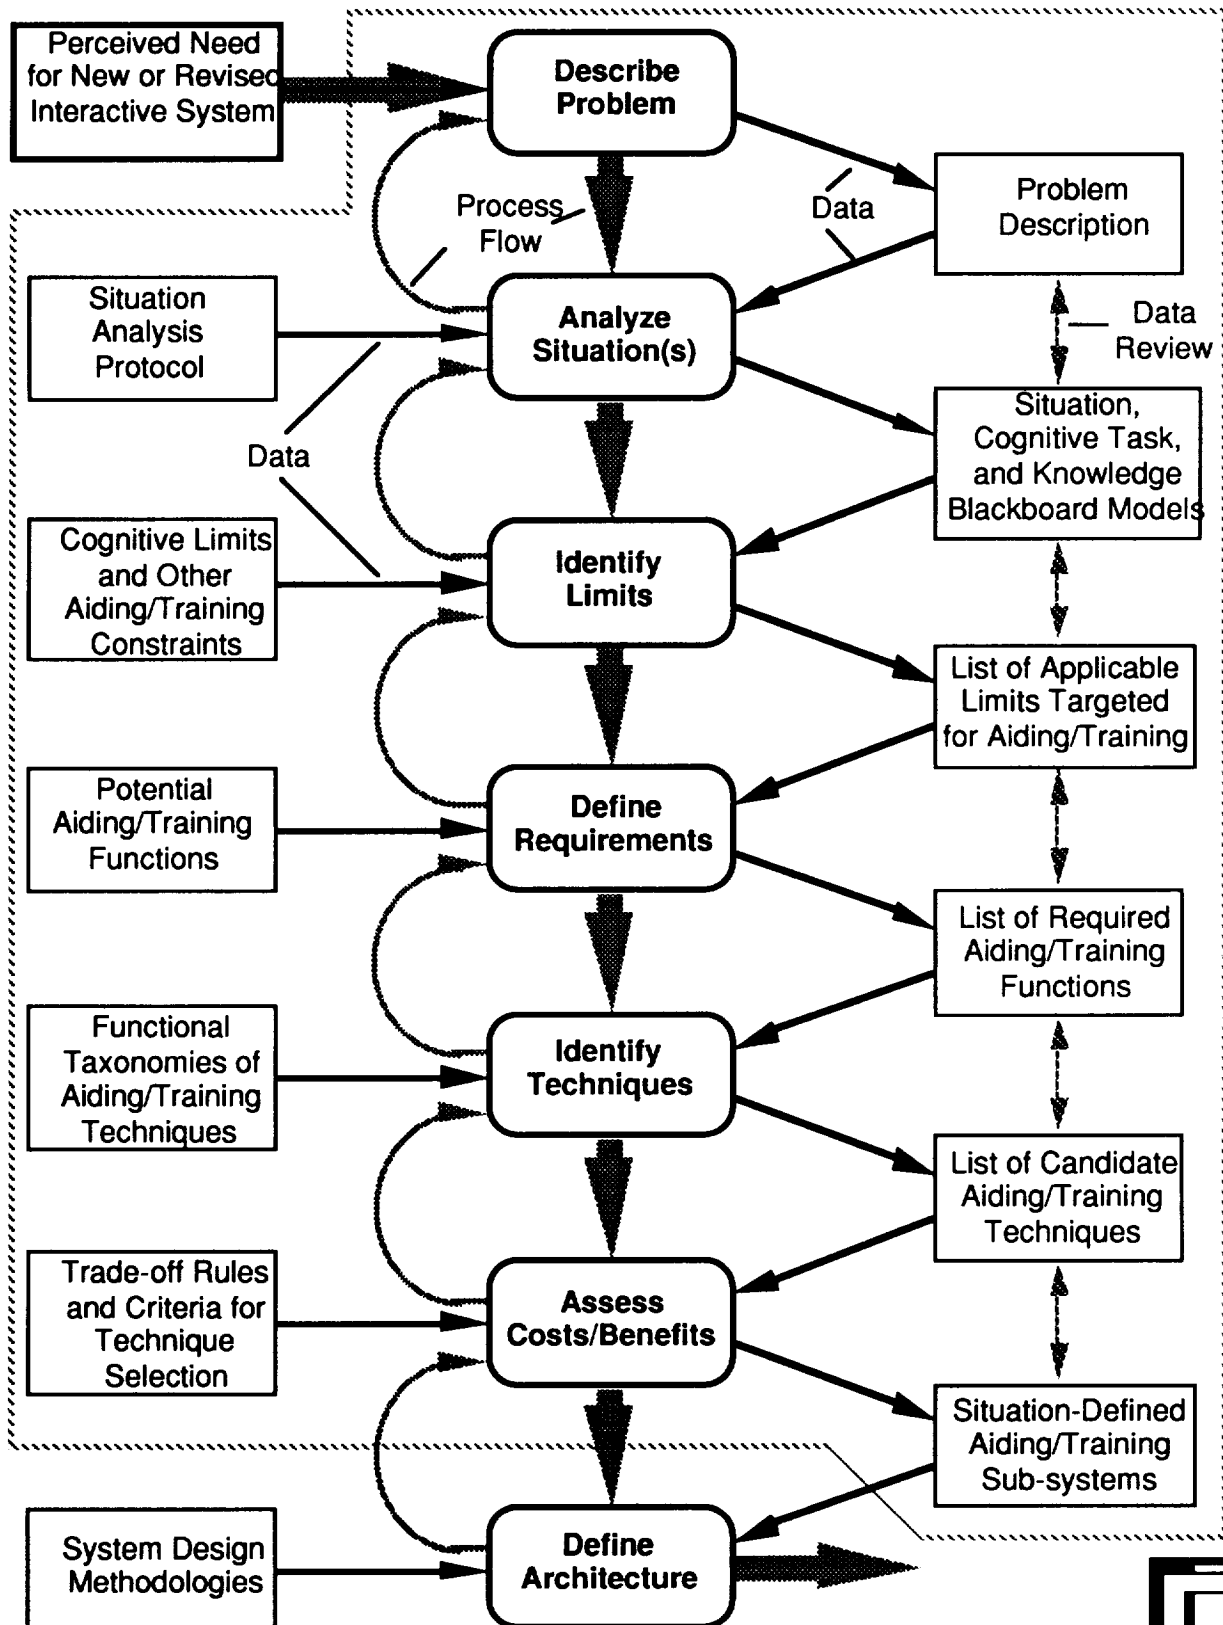

## Human Cognitive Limits

---

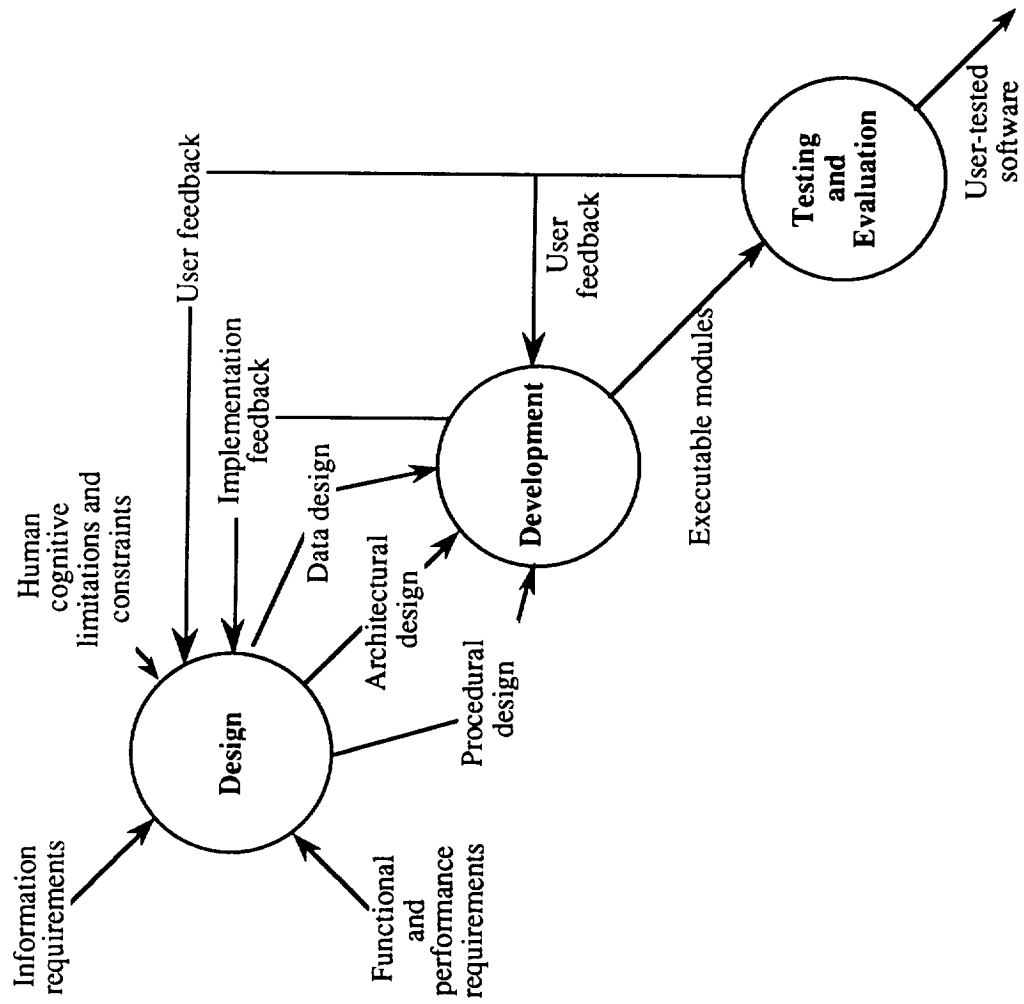

1. Predicting Processes
2. Combining Choice Attributes
3. Managing Information
4. Performing Intermediate Analysis/Reasoning Steps
5. Visualizing/Representing Problem and Solution Spaces
6. Making Required Judgments (e.g., Quantitative Judgment Biases, Maintaining Vigilance)

# Cognitive Limits Extension Methodology

# Overview of Mid-Section of Software Life-Cycle

# **Integrating Evaluation into the Full Life-Cycle**

---

1. Start with CLEM (Cognitive Limits Extension Methodology) for initial requirements analysis and aiding techniques selections
2. Follow up with initial architecture and design concepts, realized as Rapid Interface Prototypes using a Graphical User Interface (GUI) Builder
3. Evaluate overall architecture concept(s) and individual design concepts
4. Select or revise architecture concept (re-evaluating revisions as needed)
5. Revise initial individual design concepts (e.g., database navigator component, file selection component, etc.)
6. Define additional individual design concepts required for the chosen architecture
7. Evaluate new and revised design concepts
8. Iteratively revisit steps 5, 6, and 7, as needed
9. Integrate all available components of architecture
10. Evaluate integrated tool
11. Revise and re-integrate
12. Iteratively revisit steps 5 through 11, as needed

## **Tools to Aid Integrated Evaluation: The Intelligent Interface Construction (IICON) Evaluator**

---

- Supports evaluation of advanced interactive systems using X Window System
  - Aids Human Evaluator in preparing and managing evaluation sessions (e.g., test plan)
  - Records sessions, producing both machine- and human-readable dialogue transcripts
  - Records User's verbalizations, and annotations by Users and Human Evaluators
- Replays recorded sessions, including annotations, for further analyses
- Aids Human Evaluator in analyzing event sequences in dialogue
  - Aids Human Evaluator in mapping semantics of dialogue
  - Aids Human Evaluator in analyzing layout and organization of Graphical User Interface
  - Provides a central repository for storing data, notes, and results of analyses for evaluation
  - Supports distribution and re-integration of evaluation tasks, data, and results across sites
  - Aids Human Evaluator in composing recommendations for design concept changes

## DoD HCI Style Guide

## Application Specific Style Guide

# **Impact on Industry and Government**

- **Provides positive influence on HCI design**
  - Greater standardization
  - Reduced training requirements
  - Easier migration of personnel across applications and systems
  - Reduced Life-Cycle costs
- **Conformance should be expected for future system design**
- **Need to plan for migration towards conformance**

# **Style Guide Contents**

- Discussion of differences in Motif and Open Look applications
- Hardware considerations including issues relating to Computer/Electronic Accommodation Program (CAP)
- Application Interface Design Guidelines
- Objective Security Interface Requirements
- References by Paragraph & Bibliography

# **Style Guide Contents**

*June 16, 1993*

# Outline

- **Motivation**
- **Overview**
- **taeperl Language**
- **Scripting Example**

**Note: demos available**

**tæe+**

*June 16, 1993*

# Motivation

- Repeatable tests of TAE Plus applications
- Minimal human involvement
- End-to-end tests with automatic verification
- Stress tests
- Easily maintainable test cases
- Generation of script via "record" mode

**tæ+**

*June 16, 1993*

# Overview

## Notes:

- Script is sequential (as opposed to event-driven)
- Script language based on perl
- Application GUI interface remains alive
- Script is "interlocked" with event handlers
- Script may control multiple applications

**tae+**

June 16, 1993

# taeperl

- Based on perl; see Larry Wall's "Programming perl", O'Reilly & Associates, 1992
- No perl changes; only new subroutines for application scripting
- Why perl as the base?
  - Public domain
  - Interpreted
  - C-like syntax
  - Many powerful features
  - Becoming very popular in the UNIX community

**Note: taeperl may also be used as a GUI application language**

**tae+**

*June 16, 1993*

# Example Script

```
$appHandle = &Aut'Connect ("myApplication");  
for ($i=1; $i <= 1000; $i++)  
{  
    print "processing file number $i..\\n";  
    &Aut'UserEvent ($appHandle, "main", "fileName", "fileNumber$i");  
    &Aut'UserEvent ($appHandle, "main", "ok");  
    sleep(4);  
}  
&Aut'Close($appHandle);
```

**tae+**

# **TAE Plus v5.3 Extensions to DDOs**

**Karl Wolf**

**Century Computing, Inc.**

**1014 West Street**

**Laurel, MD 20707**

**(301) 953-3330**

**Internet: [kwolf@cen.com](mailto:kwolf@cen.com)**

**tæ+**

*June 16, 1993*

## Extensions to DDOs

*(aka TAE Plus v5.3 DDOs)*

- Refresher on current DDOs
- Plans for TAE Plus v5.3
- Open Issues

**tac+**

*June 16, 1993*

## Current DDOs

- Map application data values to graphical objects.
- These objects change in response to changes in these data values in one of five ways:

Mover, Rotator, Stretcher, Discrete, Stripchart

- Color thresholds can be applied to ranges of data values.
- In TAE Plus V5.2 we introduced multi-valued homogenous DDOs.
- Standard naming convention for idraw objects.
- Based on InterViews v2.6
- Entirely implemented within Wpt

**tac+**

June 16, 1993

## Plans for TAE Plus v5.3

- New acronym DDO = Dynamic Data Object  
(was Data Driven Object)
- Implemented using InterViews v3.1
- Input Capabilities
- Extensions to DDOs
- Runtime Creation of Additional Dynamics
- Heterogeneous DDOs
- Introduction of a DDO widget

**tac+**

*June 16, 1993*

## Advantages of InterViews v3.1

- InterViews v3.1 uses Glyphs. Glyphs are “light weight” objects.
- Improvements to taeidraw:
  - Can import X bitmap files as stencils.
  - Can import of color TIFF files as raster images.
- On color displays stippled fill patterns are rendered as smooth intermediate colors.

**tae+**

June 16, 1993

# Input Capabilities

Allow user to click/drag dynamic objects

When a dynamic is changed, event handler is called

- Target value is updated (just like all other presentation types)
- Value array is filled with target Real values

Allow for click/select on dynamic objects

- Target value won't change (like Push Button)
- Event handler is called

## Input Capabilities (cont.)

Input Properties apply to each dynamic in a DDO

### Input Delta

- Similar to Update Delta; picture and target update only if moved past input delta

Extend WptEvent structure to hold the additional information to support input (such as select vs. drag.)

**taet**

June 16, 1993

# Extensions to DDOs

## (2-D Movers)

Each Dynamic has 2 target indices in value array

- ♦ `dynamic1 => value[0], value[1]` => horizontal, vertical
- ♦ `dynamic2 => value[2], value[3]`

Start (Range Minimum) and Stop (Maximum) Positions

- Current 1-D Mover has an implicit start (from position in idraw file)
- Current 1-D Mover has a `stopn` picture (or defaults to edge of DDO)
- Use same for 2-D Mover
- new "rangen" picture

- For Multiple Dynamics wanting to use the same range (or stop)
  - ♦ New picture named "defaultrange" (and "defaultstop")

If no associated `rangen` (or `stopn`) for a `dynamicn`, then use `defaultrange` (or `defaultstop`)

**taet+**

June 16, 1993

## Runtime Creation of Additional Dynamics

- With addition of 2-D Movers, naturally want to do map-type DDOs
- Allow user to create new dynamic objects from a palette (e.g. place tanks, trucks, etc.)

- Additions to the Wpt\_ API:
  - Wpt\_CreateDynamic
  - Wpt\_DeleteDynamic

**tae+**

*June 16, 1993*

## Heterogeneous DDOs

- Different dynamic object types share the same static background

- In this example, dynamic3 is a discrete
- picA and picB are threshold pictures
- Still use a multi-valued Real target
- Use our v5.2 standard naming conventions to keep the WorkBench side simpler
- Input Properties, Range Min & Max, Thresholds, etc. are per Dynamic (not per DDO)

Future enhancements are planned. Terry Bleser will discuss some.

**tac+**

June 16, 1993

## Heterogeneous DDOs (cont.)

### *WorkBench Details Panel (tentative)*

**taet**

*June 16, 1993*

ORIGINAL PAGE IS  
OF POOR QUALITY

## Introduction of a DDO Widget

- The previous discussion focused on the Wpt side of the DDOs. An effort is underway to “widgetize” them.
- The plan is to support only TAE Plus v5.2 DDO functionality with the addition of multiple thresholds. This implies:
  - Each dynamic may have its own set of thresholds.
  - No input support other than what is available for current DDOs.
  - No 2-D movers.
- UIL code generation will only support v5.2 style DDOs.

**tae+**

*June 16, 1993*

## Open Issues

What does Input mean to a discrete?

What does it mean to have color thresholds for an dynamic with more than one degree of freedom (e.g. 2D-Mover)?

If a stretcher has shrunk to its minimum size (0 height or width), how do you select it to stretch it out again?

**tac+**

*June 16, 1993*

**Tenth TAE Users' Conference '93**

# **Data Driven Objects Potential Enhancements**

**Terry Bleser**

**tae+**

*June 16, 1993*

# Future Directions for DDOs

- Beyond Location, Size, and Angle
- Multi-dimensional DDOs
- Tailored Input
- Creating DDOs
- Other Media
- Escaping Flatland

**test**

*June 16, 1993*

# DDO Structure

**taet+**

June 16, 1993

# Beyond Location, Size, and Angle

- Constrained location - along a specified path
- Area, volume
- Foreground and background
- Color hue, saturation
- Visibility
- Stacking order
- Line thickness, line pattern, fill pattern
- Text attributes
- Sensitivity of each attribute

**tac+**

June 16, 1993

# Multi-dimensional Dynamics

- Move and rotate - planes, tanks
- Move and stretch (scale)
- Rotate and stretch - angle and amount for direction and speed
- Move, stretch, and rotate
- Move (rotate, stretch) and discrete
- or any combination of other attributes

**taet**

*June 16, 1993*

# Tailored Input

- Fine vs gross control
- Key/event mapping
- Hot spot definition

# Tailored Input (cont'd)

- Surrogates - graphical input object pops up on select

- Gestural input
- Currently selected object
- Alternative selection methods - multi-select, cycling
- Object interactions - drag and drop, collisions

**taet**

June 16, 1993

# Creating DDOs

- Drawing facility
  - exact positioning and sizing
  - precise control over scaling
  - fine adjustment
  - color, font, line width assignment feedback
- Import drawings from other drawing tools
- Copy dynamics from an existing ddo - change the static only
- Arbitrary names
- Hierarchy of dynamics, groups of dynamics
- Group modify - thresholds, ranges
- Semantic attributes

**tact**

*June 16, 1993*

# Other Media

## Sound output

data representation - scatter plot, size of mail  
message

symbolic “picture”

interaction of objects

## Voice input

**taet**

*June 16, 1993*

# Escaping Flatland

- 2-d Stretcher
- 3-d Mover, stretcher, rotator
- 3-d Surrogates - shadows

**tact**

*June 16, 1993*

# User Experiences with Data-Driven Objects

Patricia M. Jones

University of Illinois at  
Urbana-Champaign

Department of Mechanical and Industrial  
Engineering  
1206 W. Green St.  
Urbana IL 61801

TAE Plus User's Conference, June 1993

- Part of "pilot" course on Interactive Systems Design

Application: Manufacturing

Students' favorite  
Presentation Item:  
**Discrete DDO**

Very flexible

Utilized example in  
documentation on switching  
picture files dynamically

Easy to use

Fun!

# Wish List

Generate code for thresholds  
set for DDO's

(e.g.,

```
#define ITEM1_PICTURE1_THRESHOLD 10
```

better yet:

```
#define ITEM1_RED 10)
```

Incorporate dynamic text into  
Movers (e.g., for AGV)

In general, **composite** DDOs

New DDO: "Tracker" object  
for vehicle applications.

User draws arbitrary path  
("static"), "dynamic" vehicle  
follows it.

**tac+**

*June 16, 1993*

## Overview

Goals

Static Layout vs. Dynamic Behavior

Current Connection Capability

Separate User Interface from Application

Miscellaneous Connection Enhancements

Item-to-Item Connections

**tae+**

*June 16, 1993*

## Goals

### *Enhancements to Connections*

Allow non-programmer / UI designer to specify more dynamic behavior

Improve separation of UI and application (potentially)

Interested in input from the user community

These enhancements are only in the idea phase. They are *not* slated for a particular release

**tae+**

*June 16, 1993*

## Static Layout vs. Dynamic Behavior

Non-programmer uses the WorkBench to define the User Interface

User Interface is composed of *static layout* and *dynamic behavior*

### Static Layout

- Visual Attributes, Position, Size, Color, Font, Label

### Dynamic Behavior

- DDO Thresholds, Connections

**Problem:** Most UI dynamic behavior must be specified by the programmer. Programmer should only be concerned about the application, not the UI.

**Solution:** Extend connections to allow non-programmer to specify more dynamic behavior

**tae+**

June 16, 1993

## Current Connection Capability

### *Item-to-Panel*

Connections allow non-programmer to specify simple dialog control, e.g.

- When the user presses buttonA on panel1, panel2 appears and panel1 disappears
- Display a different panel for each choice in a menu

### No Separation of User Interface from Application

- Connection is implemented via code generated into the event handler
- If connection is changed (in the WorkBench), code must be regenerated and recompiled

**taet**

*June 16, 1993*

## Separate User Interface and Application

### *To Generate into Code -- Or Handle in Wpt*

#### Generate connections into code

- Generated code can be modified (by programmer) to integrate dynamic behavior with application knowledge
- E.g. if database is empty, display panel1, else display panel2

#### Handle connections in Wpt

- Change connection in WorkBench doesn't require application change
- Should be able to change connection at run-time

#### Which would most fit people's needs

- Applies to current and future connections
- An option would be most desirable, but we need to focus our development efforts

**taet**

*June 16, 1993*

## Miscellaneous Connection Enhancements

### Item-to-Multiple Panels

Create, delete, or change state of many panels from a single event

### Handle Multiple Selection - Selection List

Loop through all indices of value array (must be done for all event handlers)

### Default Connection

A single connection for all choices of a multiple connection item

E.g. Show panel 2 when any choice is made from a radio button

MACRO facility - developed by University of Colorado

Allows non-programmers to insert code using customizable macros

***Request input from user community***

**tac+**

*June 16, 1993*

## Item-to-Item Connections

Potential types of item-to-item connections (all driven by user-events)

- Update Properties (e.g. Sensitivity, Visibility)  
Select a mode from a Radio Button — certain control buttons dim
- Update Target values  
Manipulate a Scale — set the target value of a DDO
- Update Constraints or Menubar entries  
Press a button — change the choices of a menu
- Update View attributes  
Check a checkbox — Change the title and foreground color of a label

### ***Request input from user community***

- Consider your applications — How often would this be useful?
- Even without application knowledge?

USING THE SPREADSHEET MODEL OF  
COMPUTATION FOR DEFINING  
OBJECT DEPENDENCIES

PRESENTED BY

MARGI KLEMP  
UNIVERSITY OF COLORADA

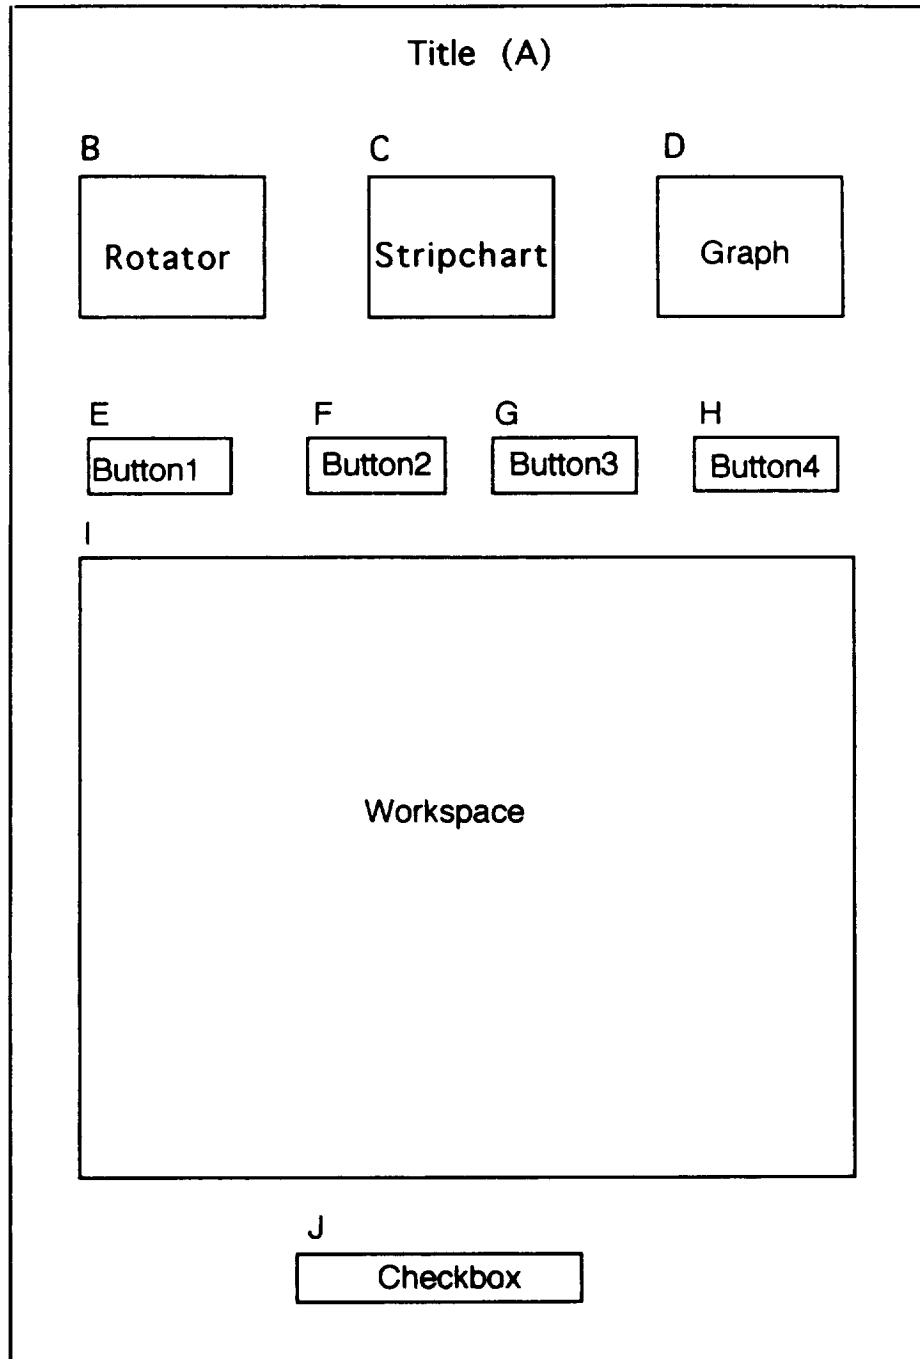

## Using the Spreadsheet Model of Computation for Defining Object Dependencies

### *Why the Spreadsheet?*

- Programming languages are difficult for non-specialists
- The spreadsheet model has done more to make computing accessible than any development since Fortran (Clayton Lewis - New Approaches to Programming, 1989)
- The spreadsheet model fits well with graphical user interfaces which can be viewed as intercommunicating objects
- NoPumpG extends the spreadsheet model to control graphical interactions and animation (Lewis, 1987)
- Software development projects at the University of Colorado are building on this model to define interactions of objects used for scientific visualization

Spreadsheet View of TAE objects:

|             | A    | B       | C          | D     | E      | F      | G      | H      | I         | P     |
|-------------|------|---------|------------|-------|--------|--------|--------|--------|-----------|-------|
| Object Type | Text | Rotator | Stripchart | Graph | Button | Button | Button | Button | Workspace | Panel |
| Bg Color    |      |         |            |       |        |        |        |        |           |       |
| Fg Color    |      |         |            |       |        |        |        |        |           |       |
| Font        |      |         |            |       |        |        |        |        |           |       |
| Xsize       |      |         |            |       |        |        |        |        |           |       |
| Ysize       |      |         |            |       |        |        |        |        |           |       |
| Visible     |      |         |            |       |        |        |        |        |           |       |
| Xorigin     |      |         |            |       |        |        |        |        |           |       |
| Yorigin     |      |         |            |       |        |        |        |        |           |       |
|             |      |         |            |       |        |        |        |        |           |       |

## Geometry Management Examples

Assume the user resizes the panel:

- Item B (rotator) changes size in proportion to the new window size

$$B.Xsize = .2 * P.Xsize$$

$$B.Ysize = .1 * P.Ysize$$

- The position of B remains the same relative to the new panel size

$$B.Xorigin = .1 * P.Xsize$$

$$B.Yorigin = .05 * P.Ysize$$

- Item E (button) remains the same size regardless of panel size. There are no formulas for the size cells

$$E.Xsize = 50$$

$$E.Ysize = 20$$

## Geometry Management Examples (continued)

- Items E - H (buttons) are always displayed in the same order but will be placed in separate rows if not fully visible on the panel

$$E.Xorigin = .1 * P.Xsize$$

F - H are positioned relative to the previous button  
We create an ordinary cell for the previous X distance.

$$\text{previous-diste} = E.Xorigin + E.Xsize + \text{spacex}$$

The formula for the X origin of button F is an if construct:

$$F.Xorigin = \text{if}(F.Xsize + \text{previous-diste} > P.Xsize, \\ E.Xorigin, \text{previous-diste})$$

- Object visibility could be controlled by a formula. Assume that item D (graph) should be invisible if the panel X size is less than 180

$$D.\text{visible} = \text{if}(P.Xsize < 180, 0, 1)$$

- If an item on a panel were resized, the origin and size of surrounding items could be defined in terms of the new size of adjacent items

## Other Examples

- Attributes can be propagated via formulas. To maintain the same background color for buttons E - H define an ordinary cell for the color

Button-color = "red"

Then use formulas to set the color for each button

E.Bgcolor = Button-color

F.Bgcolor = Button-color

...

Note that the color could be set from a menu item, a text list, etc.

- A checkbox (J) could control the visibility of workspace I

I.visible = J

## A Simpler Interface for the TAE WorkBench

Panel resize options:

- Resize an item ( or all items on panel) in proportion to the new panel size
- Leave an item (or all items on panel) the same size clipping where necessary
- Group selected items maintaining sequential positioning within the group (create extra rows or columns as needed)

Specify the options above via standard TAE interaction objects

Automatically generate the spreadsheet including formulas to define the selected option

## Summary

- The spreadsheet model of computation appears to handle many of the problems encountered by user interface designers in regard to object dependencies which would traditionally require a programming solution.
- Formulas may become quite complex. A simpler interface could be used to define the behavior for the most commonly used scenarios.

## UIL Support and Mrm Code Generation

### *Overview*

- What are UIL and Mrm?
- Advantages of UIL/Mrm Applications
- Advantages of Wpt Applications
- UIL Generation
- Sample Mrm Code (prototype)
- Sample UIL File (prototype)

**tae+**

## What are UIL and Mrm?

### UIL is Motif's *User Interface Language*

- Permits separation of user interface specification from application code.
- Textual description of the UI which is compiled into binary form called **UID** (*User Interface Definition*) using the Motif compiler, named *uil*.
- Static description (e.g., no item-to-panel connections)

### MRM is the *Motif Resource Manager*

- Set of functions in libMrm.a which retrieve the widget hierarchy from the UID file and create the widgets.
- Application code defines callbacks in the normal X Toolkit manner, but doesn't call XtCreate[Managed]Widget.

**tee+**

June 16, 1993

## Advantages of UIL/Mrm Applications

- A more standard representation for interfaces developed with TAE Plus.
- No proprietary libraries (DDOs, however, require new DDO widget library, libXtae.a).<sup>1</sup>
- Eliminates the requirements for applications to use the Wpt, Vm, and Co runtime packages, thereby significantly reducing the size of executables.<sup>2</sup>
- Eases the porting of applications to platforms not supporting TAE Plus.
- New interfaces developed in TAE Plus will be more easily migrated to other UIDTs (user interface development tools).

1. Link libs are simply "[ -lddo -lXtae -lInterViewsX11 ] -lMrm -lXm -lXt -lX11" instead of "-lwpt -lXterm -lddo -lwmw -lInterViewsX11 -lXm -lXt [-lXmu] -lX11 -ltaec -ltae -ltermib -lm -lc"

2. Test case: single panel with 29 items [all presentation types except DDOs, color logger, and dynamic text]; static layout only; comparison of Sun stripped binary size. *UIL application was approximately one-half the size of the Wpt version.* (Size of interface description files was approximately the same.)

**tae+**

June 16, 1993

## Advantages of UIL/Mrm App. (cont.)

- Improved application performance using compiled UIL file (app.uid).
- Permits access to all widget resources and callbacks for finer control than is allowed in the WorkBench.<sup>3</sup>
- Enables addition of widgets not supported by TAE Plus. Knowledgeable Motif programmers can directly add Motif widgets (e.g., XmArrowButton, XmScrollbar, XmCommandBox) to app.uid.<sup>4</sup>
- All 23 Presentation Types supported including DDOs.<sup>5</sup>

➡ **Note:** To use UIL, your Motif vendor must supply the Mrm library (default location: /usr/lib/libMrm.a) and the *uil* compiler (default: /usr/bin/X11/uil). Most vendors do provide these.

3. At this time, automatic merging of hand-edits to generated UIL when regenerating is still TBD.

4. Can also add your own widgets by registering them with UIL, which is what we've done with DDOs. This will be covered in the v5.3 *Guidelines for Adding a New Presentation Type*.

5. Dynamic Text is generated as simply an XmLabel widget in v5.3.

**tac+**

June 16, 1993

## Advantages of Wpt Applications

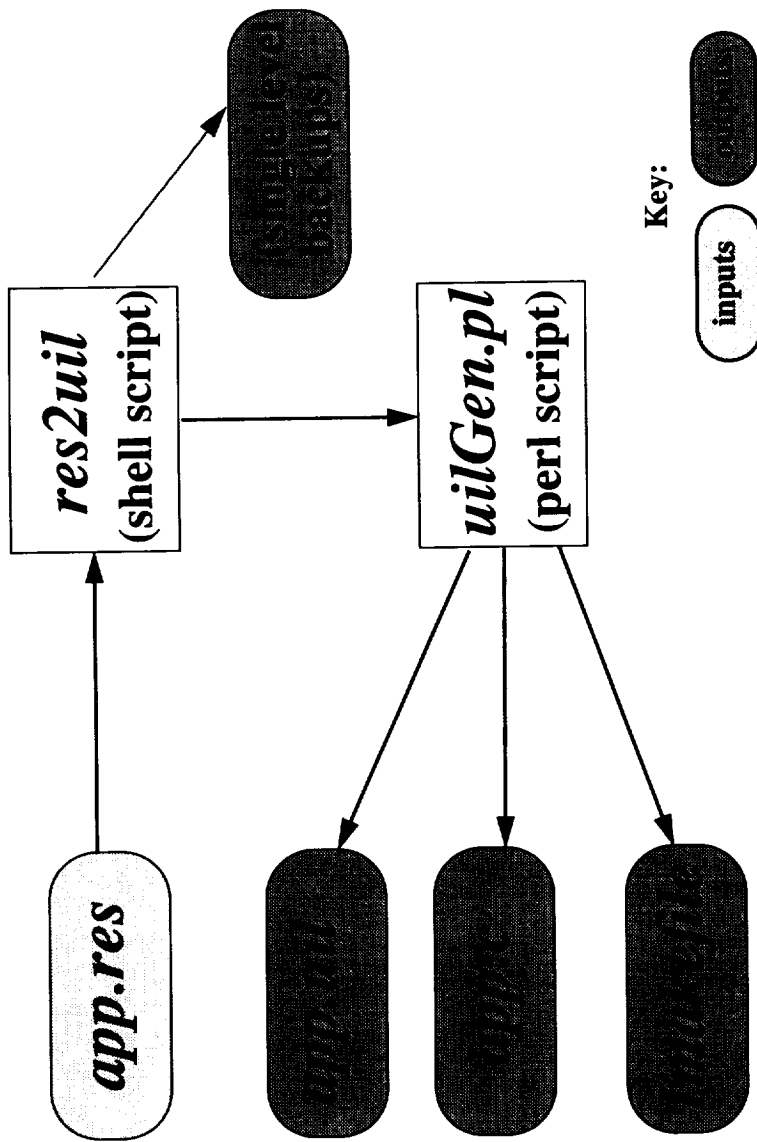

- Wpt library provides greater functionality, usually with less application code than Xt, whereas UIL apps. have to simulate Wpt\_PanelMessage, Wpt\_HideItem, Wpt\_ParmReject, etc.
- Designer and programmer need not be as familiar with Motif, Xt, and Xlib details, especially Motif resources and callbacks.
- Automatic error checking, such as for constraints (e.g., keyin, multi-line edit)
- Customized error messages (keyin, multi-line edit, textlist)
- TAE Plus Help mechanism
- Scripting (a v5.3 feature) - recording and playing back
- Code merging (a v5.3 feature; TBD whether in v5.3 UIL)
- Item-to-panel connections may only be available to Wpt applications. (TBD whether supported for UIL in v5.3.)

**tac+**

June 16, 1993

## UIL Generation

Key:

inputs

outputs

- Generated code is Mrm, Xt, and some Xlib (no Wpt or IV).
- Type "make" to build; type "make app.uid" to compile app.uid (into app.uid) using the *uil* compiler.

# GenSAA

CenterLine's  
Object Center C++  
Compiler with TAE

Data Systems  
Technology  
Division  
520

## What is GenSAA?

CenterLine's  
Object Center C++  
Compiler with TAE

- **Generic Spacecraft Analyst Assistant**
- **Graphical expert system builder for spacecraft monitoring & fault isolation**
- **Written in Centerline's C++**
- **Used TAE 5.2 for GenSAA Workbench**
- **Integrated with TPOCC**
- **GenSAA Workbench - graphical specification of:**
  - **Data to be monitored/generated**
  - **Expert System Rules**
  - **User Interface**
- **GenSAA Runtime - execution environment**

Data Systems  
Technology  
Division  
520

## Object Center C++ With TAE

CenterLine's  
Object Center C++  
Compiler with TAE

- Object Center interprets source *or* loads object code
- Used graphical debugger initially
- Found bug in Object Center related to displaying TAE widgets - Object Center / TAE responded with a fix
- Our system grew to be too large to load into Object Center's debugger

Data Systems  
Technology  
Division  
520

## Using TPOCC with TAE and ObjectCenter C++

CenterLine's  
Object Center C++  
Compiler with TAE

- TAE & TPOCC redefine several common macros
  - LONG
  - DOUBLE
- TPOCC used a C++ keyword "class"
- TPOCC & TAE work together smoothly, otherwise

Data Systems  
Technology  
Division  
520

## Lessons Learned

CenterLine's  
Object Center C++  
Compiler with TAE

- **Object Center is very good at:**
  - Enabling quick access to source files
  - Identifying compile time errors
  - Identifying runtime errors
  - Unit testing
- **Object Center is not so good at:**
  - Debugging large systems

# **TAE Tenth Users' Conference**

## **June 14-17, 1993**

### **Participant List**

| 13. ABSTRACT (Maximum 200 words)<br><br>Goddard Space Flight Center sponsored the Tenth TAE Users' Conference on June 14-17, 1993. This document represents the proceedings; the papers included are published as received from the authors. This was the first TAE conference that followed an informal workshop format with panel discussions, demonstrations, tutorials and working sessions. With the TAE software being transferred into the private sector, all future user conferences will be managed by Century Computing, Inc., the commercial developers/distributors of TAE Plus.  |   |  |   |  |
